

Crypto Investing Cheat Sheet

A Short Intro

Hi there! Phil from here Crypto Booster and Money Authority. Welcome to my crypto investing cheat sheet!

In this cheat sheet I'm going to cover the way that I currently invest in cryptocurrencies. I'm going to cover my reasons as to why I use this investment technique. I'm going to show you historical data that shows how this investment style has performed compared to other investment styles. Finally, I'm going to show you how to use this investment technique in your own cryptocurrency portfolio.

So without further ado, let's get right into it!

In April 2018 I was looking for a better cryptocurrency investment strategy...

I had a problem. I felt like I was consistently missing out on the biggest winners in the crypto markets. I was watching other cryptocurrencies skyrocket while my own portfolio continued to dwindle in the aftermath of the bubble.

On top of that, with my busy schedule, I didn't have time to research new and emerging cryptocurrencies or even manage my own portfolio. And even when I did, the process of logging into exchanges to perform the various trades was a hassle that consumed even more of my already limited time.

And that's when I came across the idea of applying an index fund strategy to the cryptocurrency market. You see, in the stocks world, index funds are a very well known and commonly used investment vehicles that track what's known as a market index.
